

## Decomposers in the Cycle of Life! (PDF 1)

Within soil, food, and outside, we have many critters and mushrooms that recycle what we don't know about! Ever wonder where cats poop when they are not at home? There is a journey that poop goes through without you even knowing in compost and soil!

In the food kingdom, we know a set of beings called **Decomposers**.

**Decomposers** - Feed on the remains of other animals. Decomposers play an important role in the ecosystem. By digesting dead matter they put the nutrients back into the soil, making them available to producers. Now that's one way to receive energy!
